

TEST TAG COLOURS

For Construction, Mining and Demolition

AS/NZS 3012 requires all construction, mining and demolition equipment to be tested every 3 months and tagged using a time-specific colour.

Dec - Feb

Other Industries

For everyone else not working in those particular industries, AS/NZ 3760 doesn't require you to use specific colours. This means you can choose any tag colour for the test periods. We recommend you use different colours for each test period so it's easily identifiable for when it requires re-testing. Choose from red, green, blue, yellow, orange, white, black and burgundy.
